## **Science Trip**

**Last Monday 20<sup>th</sup> April 2015, 1<sup>st</sup>-3<sup>rd</sup> class went to Castletymon Library to watch science experiments for Eco Week.**

**We watched a scientist make explosions. He made an explosion with vinegar, baking soda and Vitamin C tablets. He got a film case and put vinegar in it. Then he put baking soda into it. After that he put in the tablets, put the lid on, turned it upside down and the case went flying. He also made a mini volcano with the same ingredients.**

**Another thing he did was make a pin ball hover. He put it on a hair dryer. He turned on the hair dryer and the ball started to hover. He let us go on a hover board. It was actually pretty funny.**

**I thought the science trip was very interesting. It was brilliant. I learnt so much!**
